

DIM WITHOUT A DIMMER

– BUILT-IN DIMMERS MAKE FOR NEW POSSIBILITIES!

Did you know that you can dim a light without a dimmer? That there are lights which make it so that you don't have to deal with complicated installations to get the right light? Lights which are convenient and simple to use?

A light with a built-in 3-step dimmer makes it super easy to dim the light to any intensity. You don't have to install anything or think about dimmer compatibility - all you have to do is to click the light switch one, two, or three times!

1 click
= about 10% of total brightness

Click the light switch on the wall or the switch on the chord for 10% light intensity. The lowest level will not blind you – when you turn it on.

2 click
= about 50% of total brightness

One more click within three seconds and the light intensity increases.

3 click
= about 100% of total brightness

One more click for maximal light intensity.
